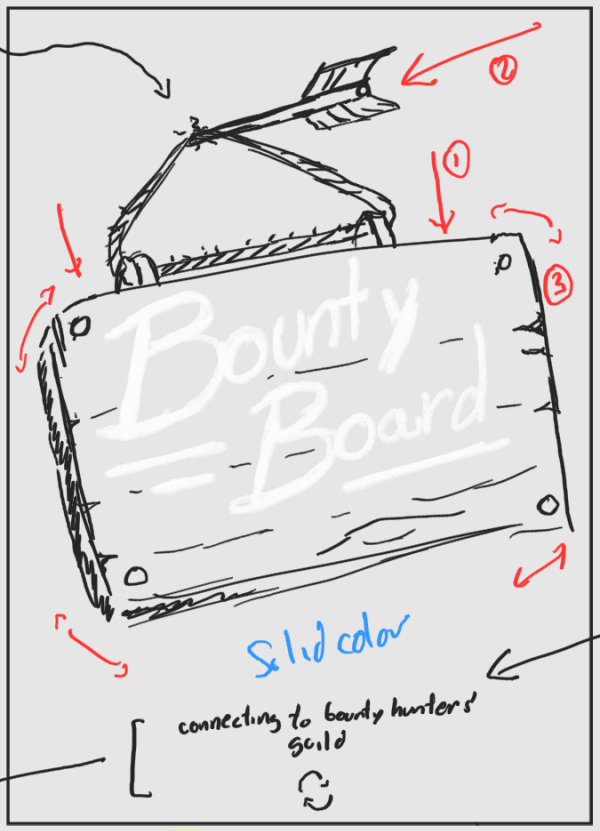
Could switch depending on user's domain of expertise
- As versions switch, switch main weapon stabbing the billboard
V1.0 — Arrow Version

Bounty Board

Splash screen and first screens concept art

1



white

SPLASH → On connection fail, board fails and error msgs with code

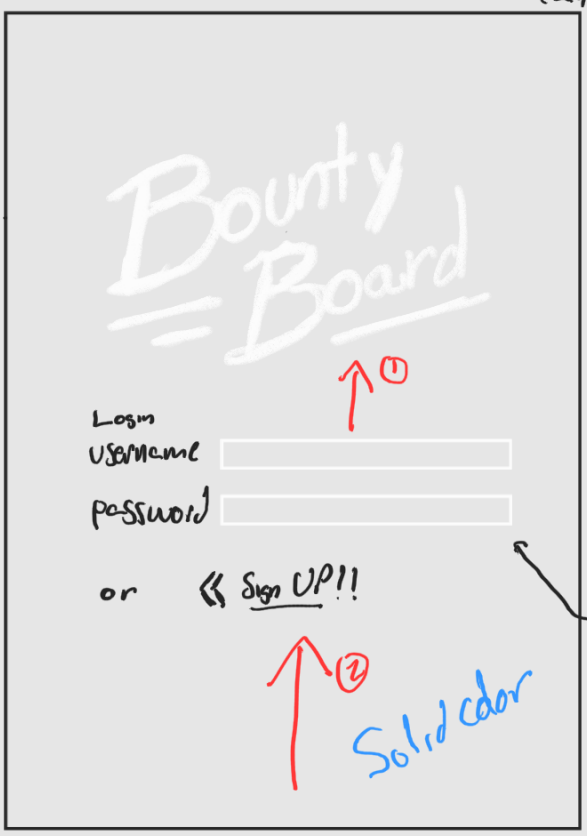
Notes

- Tendency towards simple palettes
  - Although palette change on context switch might be OK
    - LGBT??
    - → Color Theory
- Pastel colours better?

Solid color

- Colorful thematic logo → fade to minimalistic logo in white
  - Show only once, then only minimalistic white?

2



Maybe round edges?

3.1 Page after login, still to be designed

On progress* move to the left, to show next screen
→ in this case login / signup

*Defn: change of screen through interaction

3.2

Solid color banner to indicate section (or overall subcathegory for browsing); there must be a default one

Who are you?

A Bounty Hunter!

On select

A Bounty Keeper! ② ① TAP

③

STEP 1 of X

Must be below 5 for both or

X < X

bounty keeper bounty hunter

to allow for quick service lookup; related to B

* On Sign UP!! swipe left...
- Could be a button in alpha

A

On select:

Highlight color on selected option and expand downwards with role description.
- If too large make it scrollable
- Mustnt be too large
- Concise
- Maybe another button with extended role description

B

Maybe third option for "just" job browsing
- still need an account to make direct requests
- Might make bounty hunters skip services through app.

1.5

Solid color

Bounty Board ①

<< NEXT white

Please select app language * 2nd color

TAP English (default) white or 2nd color — choice

Please select app theme * 2nd color

TAP Light white default or 2nd color — choice

*can be changed later

Fade into existence after 1sec

On first boot

+ Select Language
- Multiple localizations (Canada)

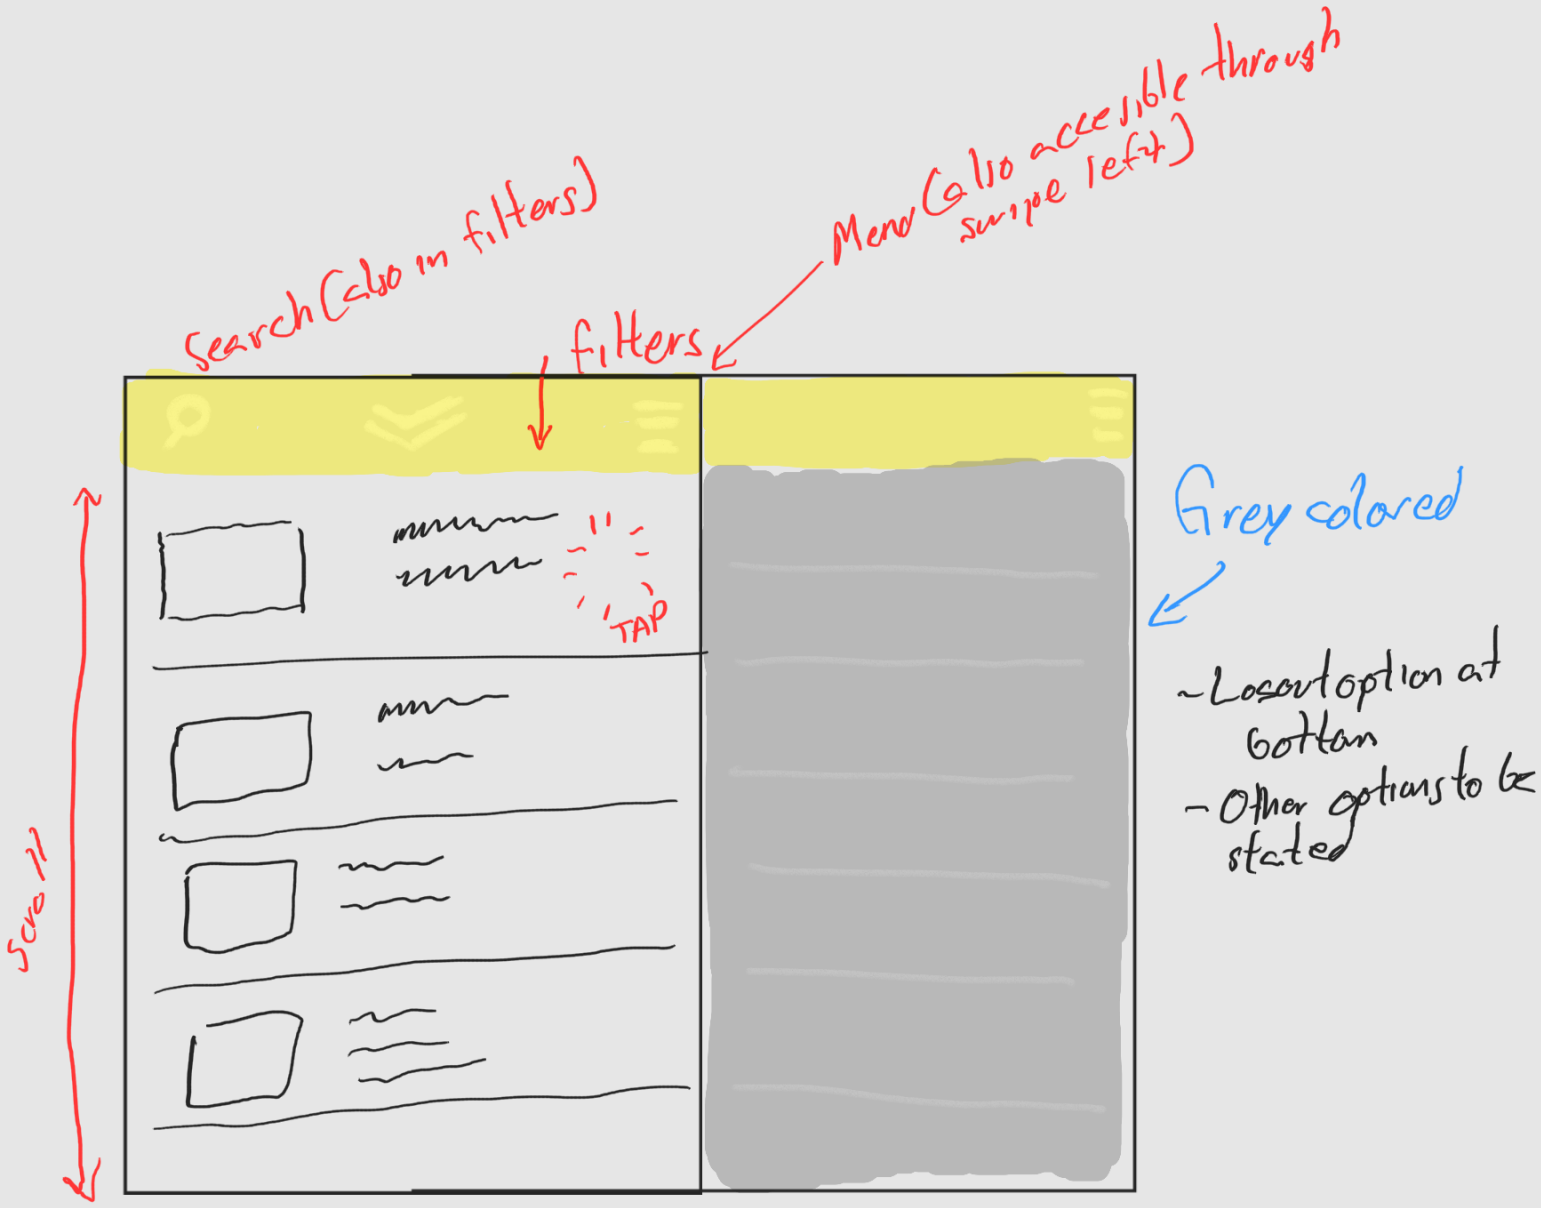
+ Select theme

Must be implemented first
- Light (default)
- Dark
- Medieval
- Futuristic

Both option can be saved to one's account and changed later

or device? dependent

General browsing screen concept art



- Add "back button" functionality
- Filters to be defined
  + Use sliders, checkboxes; minimize typing
